ABOUT ME

Experienced DevOps Developer with a strong background in complex infrastructure and developing large-scale systems, towards completion of BSc studies in Computer Science. Proficiency in improving CI/CD processes, developing automation and writing scripts, building pipelines and deep understanding in Kubernetes and Docker.

Experience working with artificial intelligence systems (AI), working in accordance with Agile methodology, working with various interfaces, including development teams. Analyzing and solving problems, thorough, order and organization, curiosity, self-learning, performing well independently and within a team, mentoring capabilities with excellent interpersonal skills.

TOOLS & TECHNOLOGIES

Cloud: Azure, AWS, GCP

Automation: CI/CD, Azure DevOps Pipelines, YAML-based Pipelines, Python, PowerShell, Infrastructure as Code (Terraform)

Version Control: Git

Monitoring & Operations: SCOM, Splunk

Containers & Orchestration: Kubernetes, OpenShift, Docker, Helm, Docker Compose

System Admin: Linux, Windows

DB Admin: MSSQL, PostgreSQL, MongoDB

Methodologies: Agile, Scrum

EDUCATION & PROFESSIONAL COURSES

2022 - Present

BSc in Computer Science, specializing in AI, College of Management (completion: 07/2025)

Studies: Algorithm Development in Python (100), Web App Development (100), Algorithms (94)

Final Project: Developing a Web system for predicting basketball game performance (2024-pres)

- System specification, Frontend and Backend design and development
- Utilizing Python while transferring data between systems using Terraform

2021

DevOps Course, Pre-Military Course

2017 - 2020

Full Matriculation, Computer Science and Physics, Revivim High School, Rishon LeZion

PROFESSIONAL EXPERIENCE:

2021 - Present:

DevOps Engineer, IDF Mamram

- **DevOps Developer** for organizational knowledge management systems, including complex infrastructure, providing service to approx. 100,000 users.
- **Improving processes (CI/CD)**, including analyzing existing processes and identifying opportunities for streamlining and improvement while developing new infrastructure.
- **Designing, deploying, and optimizing Kubernetes applications** on OpenShift, ensuring high availability and scalability.
- **Writing scripts in various languages** for automation with the aim of streamlining work processes and leading to infrastructural stability, availability and survivability.
- **Implementing new AI systems** and creating an interface with existing systems while utilizing Docker and leading to improving performance.

- **Detecting and resolving faults** in Microsoft and Kubernetes-based operational systems, including managing infrastructure, communications and security.
- **Running solution tests** while focusing on testing the infrastructure and user interface.
- **Writing YAML docs and building Pipelines** in Azure DevOps systems.
- **Conducting tests and research (POC)** on AI systems in Kubernetes while working with GPU processors.
- **Working in accordance with Agile methodology** while participating in team meetings and executing tasks in accordance with the work plan and priorities.
- **Working with intra and extra-organizational interfaces**, including developers, QA and infrastructure teams.
- Participating in upgrading a strategic IDF system, including writing scripts for automation and using Terraform and Azure DevOps for CI/CD processes.
- Participating in system architectural design and transferring 50 terabytes of DB (SQL) data between remote servers while preventing system downtime and preserving data integrity.

CERTIFICATES:

Certificate of Professional Excellence (09/2024)

LANGUAGES:

Hebrew – Native || English – High Level
