

Protected Message API

Build a REST API in Node.js using the Express framework.

Requirements:

1. GET /public must return a JSON message.
2. Protect GET /public with JWT authentication. Requests without a valid Bearer token must be rejected with HTTP 401.
3. Data may be kept in process. No database is required.
4. Unit tests are not required.

Deliverables: the Express application and its package.json.
