

Task Manager REST API (Java / Spring Boot)

Build a REST API in Java using the Spring Boot framework.

Requirements:

1. Persist tasks in a PostgreSQL database using Spring Data JPA.
2. CRUD endpoints: GET /tasks, POST /tasks, PUT /tasks/{id}, DELETE /tasks/{id}.
3. A GET /health endpoint returning the service status.
4. A Task entity exposing id, title and done fields.

Deliverables: the Spring Boot application (pom.xml, sources and configuration).
